CLAUDE CODE SKILL · /USERS/TINGYANG/.CLAUDE/SKILLS/ASIF

ASIF — *explain it as if I were…*

Name any topic, add one tag, and get a researched, source-annotated, horizontal-swipe web slide deck pitched at exactly one audience: a 5-year-old, an undergrad, or a researcher.

HOW TO TRIGGER IT

Put the tag anywhere in your message, any capitalization. Everything else is the topic.

```
Explain to me CRISPR. ASIF-KIDDO
```

```
asif-bs: how do vaccines work?
```

```
ASIF-PHD diffusion models
```

Several tags in one message build one deck per tag, simplest first. Ask in another language and the slides are written in it.

FOLLOW-UPS

- **"go deeper"** moves the last deck up one level; **"simpler"** moves it down.
- **"now ASIF-PHD"** (a tag alone) re-explains the previous topic at that level.
- Ambiguous topic ("Explain Mercury")? It asks one short question, then starts.
- Ordinary explanation requests without a tag are not touched by the skill.

THE THREE MODES · SAME START ("WHAT IS IT?"), DIFFERENT CEILINGS

ASIF-KIDDO

A curious 5-year-old

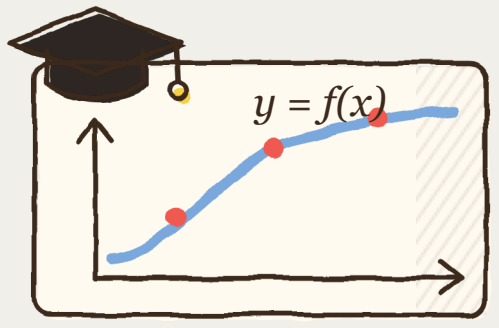

Can say what it is and why it matters.

ASIF-BS

A smart undergrad

Knows calculus and stats, not this field.

ASIF-PHD

A researcher, new to the topic

Reads Nature papers, from a nearby field.

Saved on the Desktop

Each deck is one HTML file written to `~/Desktop/ASIF/<topic>-<mode>/index.html`, e.g. `crispr-kiddo`, `vaccines-bs`, `diffusion-models-phd`. It opens in your browser: ← → to flip, ESC for overview, P for presenter mode.
